An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Kien Le on or about 1/23/06.

The application has been amended as follows:

IN THE SPECIFICATION

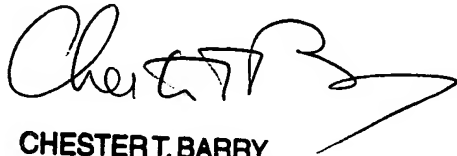

The paragraph on page 4, beginning at line 34, which was amended in the paper filed 11/14/05, was amended further as follows:

The invention primarily includes aeration device 1 and reaction device. The differences between it and prior art are that an aeration zone 2 and a settle zone 3 are provided in the reaction device, the aeration device is located above the aeration zone, and a barrier 4 and a gap 5 are arranged between the aeration zone 2 and settle zone 3. In practice, the air intake 6 of the aeration device is installed in the middle of the wastewater inlet pipe 7. One end of the sleeve 11 is connected with exit of the wastewater inlet pipe; the other end is connected with one end of the diffluent implement 8, also known as current divider 8, of which other end is connected with one end of the sleeve 12. An uplift zone 9 is provided near the connection of the aeration zone and aeration device, a diversion area 10 is provided between the uplift zone and settle zone, a sludge concentration area 13 is provided between the aeration zone and the settle zone, a sludge outlet 15 is provided in the sludge concentration area, a outlet trough 14 is provided at one side of the settle zone, a gap 16 between sleeve 11 and sleeve 12, and current divider 8 equipped at the gap. The diffluent implement is approximately hollow and conical with an upward arc shape in its big end. The inlet pipe is consisted of a slanting pipe 17 and a straight pipe 18 between which there is an included angle in 15-45 degree. Sleeve 11, sleeve 12 and the diffluent implement between them are all vertical.

Art Unit: 1724

Examiner Comment:

It is clear from at least the flow arrows of Fig. 3 that diffluent implement 8 divides a portion of the current flowing downwardly through sleeve 11 through gap 16.
